

## Ethylbenzene

is a clear, flammable liquid with an odor similar to gasoline. It is present naturally in crude oil, some natural gas streams and coal tar.

Almost all ethylbenzene comes from natural sources; only about two percent is man-made.

Naturally-occurring ethylbenzene is a component of auto and aviation fuels. It is also present in crude petroleum streams and is a significant component of mixed xylenes used in many different household sprays, paints, rubber adhesives, auto cleaners and more.

>98% OF ALL ETHYLBENZENE COMES FROM NATURE.

This section features three circular icons representing different products: a gas pump (dark blue), a spray bottle (medium blue), and a spray can (red). Lines connect these icons to a list of products on the right. Two red downward-pointing triangles are positioned above the list.

- RUST PREVENTATIVE
- INSECTICIDE SPRAY
- DYES
- DEGREASER
- AUTO CLEANER
- GASOLINE/OTHER FUELS
- PAINT THINNER
- PAINT REMOVER
- SPRAY PAINT
- RUBBER ADHESIVE
- WOOD STAIN
